

HW18 – Tableau Observations:

1. With the data set available, it appears Board Walk & 14 was the popular starting point for New York.
2. The summer months peaked the bike rides, viewing the Q2 and beginning of Q3 peaking the bike rides. One would suspect it because weather is at its optimal during this time of the year.
3. Logically, the large decline at the beginning of the Q4 is because it is the beginning of the fall and winter months.
4. From observing the data, one is suggest the top 10% would because it is in the most automobile traffic areas.
